

## Exciting new tool used by Olympians and Professionals

### 4 Way STRETCH STRONG RECOIL

The Biomechanical approach afforded by **Dynamic Tape** has been quickly adopted in Australia, UK and beyond due to its ability to directly manage load and modify movement patterns with preliminary research now supporting this.

Originally developed for Sports Physiotherapy, Dynamic Tape is rapidly becoming an essential tool for therapists of all disciplines, proving extremely popular with neurologic, paediatric and hand therapists.

Dynamic Tape is highly specialized and designed to contribute genuine mechanical force into the kinetic chain. Working like a bungee cord, the unique, strongly elastic Dynamic Tape aims to absorb load, contribute to force generation, improve biomechanical efficiency and modify faulty movement patterns. Load reduction combined with powerful neurophysiological effects may provide prompt pain relief, reduce metabolic demand, facilitate recovery and improve function.
